To: Hiring Manager / Selection Team

Application for Full Stack Developer / Software Engineer

Dear Hiring Team, I am writing to express my enthusiastic interest in joining your organization as a Full Stack Developer / Software Engineer. With 4 years of experience specializing in backend architecture, scalable web systems, and database optimization, I am eager to bring my technical expertise and problem-solving skills to your team.

Throughout my career at Isotech, I have engineered robust systems using Node.js, Express, React, Laravel, and SQL/NoSQL databases. My core accomplishments include redesigning a monolithic API into microservices (reducing response times by 85% from 800ms to 120ms), optimizing complex MySQL/PostgreSQL queries (cutting report generation times from 45s to 3s), and developing geolocation platforms that improved logistical efficiency by 25%.

In addition to enterprise solutions, I am the creator of D-Stack Framework (a Full-Stack monolith CLI tool on NPM) and actively maintain utility packages on NPM (such as fluent-rest-client and react-apextable-pro). I am deeply committed to writing clean, maintainable code, implementing rigorous automated testing (Jest, Postman), and mentoring junior developers to accelerate team productivity.

My strong foundation in computer engineering and software design principles allows me to master new technologies quickly and deliver immediate value. I welcome the opportunity to discuss how my experience and passion for engineering excellence align with your goals. Thank you for your time and consideration.

Sincerely,

José David Ayala Franco
Software Developer
