Application for Full-Stack Software Engineer - Cloud & Infrastructure

Dear Hiring Team at Enroute, I am writing to express my strong interest in joining your team as a Mid-Senior Full-Stack Software Engineer (Cloud & Infrastructure). With 4 years of hands-on experience building modern web applications (TypeScript, React.js, Node.js), provisioning cloud infrastructure on AWS, administering Linux servers, and automating deployments through Docker and CI/CD pipelines, I am confident in my ability to deliver immediate value to your internal development operations.

Throughout my career at Isotech, I have embraced complete ownership of software solutions across their development, deployment, and operational lifecycles. Notable achievements include migrating a legacy monolith to distributed microservices with Node.js and TypeScript (slashing response latency by 85%), establishing automated CI/CD and Docker pipelines that cut production bugs by 40%, and tuning complex MySQL queries to accelerate report generation from 45s to 3s.

I bring solid experience in configuring Linux application environments, managing secrets and access controls (JWT/OAuth), and conducting root-cause troubleshooting across application code, infrastructure, and networking layers (HTTP/HTTPS, DNS). Additionally, I hold certified bilingual proficiency in English (C1-C2), ensuring seamless technical communication.

My degree in Computer Engineering reinforces my commitment to architectural excellence and continuous improvement. Thank you for your time and consideration; I welcome the opportunity to discuss my qualifications during an interview.

Sincerely,

José David Ayala Franco
Full-Stack Software Engineer - Cloud & Infrastructure
